

GPS ASSET TRACKING & RECOVERY

GPS ASSET TRACKING & RECOVERY

Using high-tech Global Position System (GPS), Commissionaires can quickly locate designated vehicles, equipment, inventory or materials, inside or outside, at any time. When your property moves beyond an invisible barrier you designate, an alarm at Commissionaires automatically reports its location.

You can also access our GPS information by logging onto a secure site and downloading a map for employees or service technicians.

GPS asset tracking is a smart addition to your security systems because it is client-centered. You control the system's security and location functions and you can modify alarm protocols via the Internet. Transmitter units can be transferred so you can keep protecting your crucial assets as you upgrade, add, subtract, or relocate vehicles, equipment and inventory.

OUR SYSTEMS:

- > prevent theft and help recover assets;
- > designate vehicles, equipment, or inventory;
- > can pinpoint property and plot course on a detailed map;
- > can be initiated in two ways, automated virtual fence or on demand;
- > will trigger alarm if property goes beyond virtual fence;
- > provides real-time updates;
- > offer transmitter units that are transferable;
- > allow you to log on anytime with secure password-protected website.

Let Commissionaires help you keep track of your property.
